### Full Video Solution

A variety of NVRs & IP Cameras to tailor a solution for every application.

### One App. Integrated Solution

Integrated with RISCO's professional security systems for real time alarm verification, Live View and recording.

### Powered by the RISCO Cloud

Event evidence backup, remote admin management and advanced cyber security.

# Triple Action – for the 30 seconds that matter the most!

Traditional CCTV provides two main functionalities: live view and recording playback. VUpoint adds a third key element - real time push alarm notification with images and 30sec video clips sent directly to the smartphone. This real time alarm notification with visual evidence from the right camera at the right time, enables the user and monitoring station to take immediate action!

## Maximizing Security with integrated Alarm & Video

At the time of an alarm event, when time is of the essence and every minute counts, an integrated solution is needed. VUpoint is designed to optimally handle alarm events by actively providing the user or monitoring station with real time visual evidence, saving precious time and enabling the right decisions to be taken in real time.

As traditional CCTV systems are designed to provide either live view or post event analysis and does not differentiate between routine and alarm event, it cannot be used as a tool for end users and monitoring stations to handle events in real time and take the necessary immediate measures.

# VUpoint Integrated Video Solution

## Tailor a solution for any small to medium size installation

RISCO's integrated solution provides a comprehensive variety of video & alarm components, allowing you to tailor the right security solution to fit the needs of residential or small to medium-sized businesses.
