1. REGISTRATION AND LOGIN

Users can register the account by mobile phone and Email which currently support 200 countries and regions on the world. The verification code will be sent to user's mobile phone or email, and the registration will be successful after the verification.

	< *■D			
mobile phone Email			search	
country/region CHINA(+86)		Afghanist	an	+93
input the phone number		Azerbaija	n	+994
Hease enter a 6-20 alphanumeric password	-	Oman		+968
		United Ar	ab Emirates	+971
verification code get the code		Albania		+355

1.1 SECURITY QUESTION SETTINGS

You will be taken to the security question settings page when registration is successful. When log in on a new device, the user can authenticate himself by answering the above questions.

••••• A&AT 🍄 16:59	★ ★ ■ 0	••••• ASAT 😤		D	🕈 TABA DIRE		
\leftarrow Security question settings					← securi		
⊗successful					It can be verified by answ	ering questions when logging i	n to a new device

next step			cancel				

1.2 LOGIN AUTHENTICATION

Log in with your mobile phone number or email account on the login page. The mobile phone number is automatically recognized by the system and does not input the country code. If you have forgotten your password, you can go to the password page to reset your password. When reset the password, you can receive a verification code from your mobile phone and email address.

When the account is logged in on the new mobile phone, it needs to be verified. When it is passed, you can log in on the new mobile phone. All the data can be viewed and used on the new mobile phone.

	atese login	≁ * ■D register	••••• AEAT	e tost Retrieve pa

1.3 WAYS OF IDENTIFYING

There are two ways of security verification. One is the way to get the verification code via the account number, and the other is the way to answer the question. If the current account is set the "answer the question" verification, then when the new device is logged in, there will be an "answer question verification" option.

1.4 LOGIN SUCCESSFUL

The first time you use the lock lock app, if there is no lock or key data in the account, the home page will display the button to add the lock. If there is already a lock or key in the account, the lock information will be displayed.

2. LOCK MANAGEMENT

The lock must be added on the app before it can be used. The addition of a lock refers to the initialization of the lock by communicating with the lock via Bluetooth. Please stand beside the lock. Once the lock is added successful, you can manage the lock with the app including sending a key, sending a password, and so on.

When the lock is added, the adder becomes the administrator of the lock. At the same time, the lock cannot enter the setup mode by touching the keyboard. This lock can only be re-added after the current administrator has deleted the lock. The operation of deleting the lock needs to be done by Bluetooth beside the lock.

2.1 LOCK ADDING

The App supports multiple types of lock, including door locks, padlocks, safe locks, smart lock cylinders, parking locks, and bicycle locks. When adding a device, you must firstly select the lock type. The lock needs to be added to the app after entering the setting mode. A lock that has not been added will enter the setting mode as long as the lock keyboard is touched. The lock that has been added needs to be deleted on the App first.

••••• AAAT 🗢	16:59 lock type	18 00	••••• ABAT	* 1659 nearby lock	+3 ≡ 0

Your phone is not connected. Please open the manually uplead data after adding a k		Make	sure the network is ok. Click Uploan	l Data to
next step			date uploading	

2.2 LOCK UPGRADING

User can upgrade the lock hardware on the APP. The upgrade needs to be done via Bluetooth next to the lock. When the upgrade is successful, the original key, password, IC card, and fingerprint can continue to be used.

2.3 ERROR DIAGNOSIS AND TIME CALIBRATION

Error diagnosis aims to help analyse the system problems. It needs to be done via Bluetooth beside the lock. If there is a gateway, the clock will be calibrated firstly through the gateway. If there is no gateway, it needs to be calibrated by the mobile phone Bluetooth.

2.4 AUTHORIZED ADMINISTRATOR

Only the administrator can authorize the key. When the authorization is successful, the authorized key is consistent with the administrator's interface. He can send keys to others, send passwords, and more. However, the authorized administrator can no longer authorize others.

3. KEY MANAGEMENT

After the administrator successfully adds the lock, he owns the highest administrative rights to the lock. He can send keys to others. Meanwhile he can increase the key management that is about to expire.

•	123456 09:31:16	unlock with I	Passcode 123456

4. PASSCODE MANAGEMENT

After inputting the passcode on the keyboard of the lock, press the unlock button to unlock. Passcodes are classified into permanent, time-limited, one-time, empty, loop custom etc

4.1 PERMANENT PASSCODE

The permanent passcode must be used within 24 hours after it is generated, otherwise it will auto -matically expire.

4.2 TIME-LIMITED PASSCODE

The time-limited passcode can own an expiration date, which is a minimum of one hour and a maximum of three years. If the validity period is within one year, the time can be accurate to the hour; if the validity period is more than one year, the accuracy is month. When the time-limited passcode is valid, it should be used within 24 hours, otherwise it will automatically expire.

4.3 ONE-TIME PASSCODE

One-time passcode can only be used for one time, and which is available for 6 hours.

4.4 CLEAR CODE

Clear code is used to delete all the passcodes the lock has set, and which is available for 24 hours.

User can set any passcodes and validity period he

4.7 PASSCODE SHARING

The system add new communication ways of Facebook Messenger and Whatsapp to help users share the passcode.

	Se	end a passoo	de to	
0	0	0	0	0
WeChat	SMS	Mailbox	Messenger	Whatsapo

4.8 PASSCODE MANAGEMENT

All generated passcodes can be viewed and managed in the password management module. This includes the right of changing the password, deleting the password, resetting the password, and unlocking the password.

5. CARD MANAGEMENT

You need to add the IC card first. The whole process needs to be done via the app beside the lock. The validity period of the IC card can be set, either permanent or time-limited. All IC cards can be queried and managed through the IC card management module. The remote card issuance function is displayed in the case of a gateway. If there is no gateway, the item is hidden.

6. FINGERPRINT MANAGEMENT

Fingerprint management is similar to IC card management. After adding a fingerprint, you can use the fingerprint to unlock the door.

7. UNLOCK VIA BLUETOOTH

App User can lock the door via Bluetooth and can also send the Bluetooth ekey to anyone.

UNLOCK BY APP

One-time passcode can only be used for one time, and which is available for 6 hours.

9.5 ABOUT

In this module you can check the app version number.

10. GATEWAY MANAGEMENT

The Smart lock is directly connected via Bluetooth, that is why it is not attacked by the network. The gateway is a bridge between smart locks and home WIFI networks. Through the gateway, the user can remotely view and calibrate the lock clock, read the unlock record. Meanwhile, it can remotely delete and modify the password.

10.1 GATEWAY ADDING

Please add the gateway via APP:

- A Connect your phone to the WIFI network which the gateway is connected to.
- B Click the plus button in the upper right corner and input the WIFI passcode and gateway name. Click OK and input the passcode for authentication.
- C Press and hold the setting button on the gateway for 5 seconds. The green light indicate that the gateway has entered the add-on mode.

10.2 MANUAL

After a short period of time, you can see which locks are in their coverage in the app. Once the lock is bound to the gateway, the lock can be managed through the gateway.
